RE: 84 Snow Road Rear/ Proposed Wireless Communication Facility Application

To Whom it may Concern:

I reviewed the narrative for the proposed cell tower on 84 Snow Road. I am deeply concerned about this project with respect to property devaluation due to incongruous aesthetics, nuisance noise and documented health risks.

My property directly abuts the proposed cell tower location. I am requesting you deny the project entirely. At a bare minimum, please deny the requested waiver to Bylaw 5.8.6.1 and maintain the appropriate distance of 286' to the nearest structure.

My concerns are as follows:

RECEIVED

JUN 12 2019

**PLANNING BOARD
GRAFTON, MA**

EXHIBIT 9

The tower at 143' in height will be visibly intrusive. The tower will clearly exceed the tree line which I would approximate at 80' at its highest point. This will undeniably result in a devaluation of neighborhood property in general, abutters in particular. I would expect the tower to be visible for the entire neighborhood.

The tower will produce noise from the generators creating another nuisance for abutting property owners. This will also cause a devaluation of property value. We already have trains running at all hours of the bottom of the street which have already created a nuisance for the neighborhood.

Most importantly, the health risks are well documented for radiation produced by these towers. These towers have only been around for 20 years. It's too early to blindly buy the "All is safe, All is fine" from the telecommunication industry.

Please don't forget the cell tower at Indian Lane. All the expert analysis/studies appear to have resulted in a failure. I can't understand why moving the tower would do anything more than irritate more people. I can't understand why you would listen to this again.
